

Ultimate DSA Placement Dashboard - SRS

Version 5

Final Volume: Implementation Roadmap, Quality Standards & Future Expansion

Implementation Milestones

Phase 1: Workbook skeleton, tables, and dashboard.

Phase 2: Master problem database (300–350 curated problems).

Phase 3: Formula engine, revision scheduling, conditional formatting.

Phase 4: Analytics, charts, company readiness.

Phase 5: Testing, optimization and documentation.

Quality Standards

- No duplicate problem entries.
- Consistent naming for all topics and patterns.
- All hyperlinks must be clickable.
- Every formula should avoid circular references.
- Dashboard should refresh automatically from tracker data.

Testing Checklist

1. Status updates correctly.
2. Revision dates recalculate.
3. Charts update dynamically.
4. Filters work for every field.
5. Company readiness changes with progress.
6. No broken hyperlinks.

Backup & Version Control

Maintain versions (v1.0, v1.1, v2.0).

Keep a backup before structural changes.

Document new features in a changelog sheet.

Future Features

- Power BI integration
- AI-based weak-pattern detection
- Calendar sync for revision reminders
- Import LeetCode history
- Import contest statistics
- Personalized study recommendations

Recommended Workbook Workflow

Morning: Review today's revision queue.
Afternoon: Solve 2–3 unseen medium problems.
Evening: Update tracker, confidence score, notes and next revision.

Success Definition

The workbook is successful if it answers, every day:

- What should I solve today?
- What am I forgetting?
- Which patterns are weak?
- Am I ready for my target companies?
- How close am I to placement readiness?

Project Deliverables Summary

Deliverable	Status
Architecture Specification	Complete
Workbook Design	Complete
Dashboard Blueprint	Complete
Revision Engine Design	Complete
Analytics Blueprint	Complete
Implementation Roadmap	Complete
Curated Problem Database	To Be Implemented
Excel Workbook	To Be Implemented
